SECTION TWO OF THE APRIL 1962 ISSUE OF THE PAPER INDUSTRY

Index to Volume Forty-Three

The PAPER INDUSTRY

April 1961—March 1962

Page numbers in this index are preceded by numbers of the issues. April 1961 is No. 1, and March 1962 is No. 12

ARTICLES

A

A new pulper in operation at Gilman Paper Co. (A. W. J. Dyck), 7, 442.
APPA views export trade problem (1962 meeting), 12, 775.
A review on paper week (1961) (Warren B. Bullock), 1, 29.
Automation in finishing, shipping and converting (Jesse P. Rambo), 1, 25.
Automating the paper mill's maintenance program, 11, 708.
Automation — what does it accomplish? (Clifford E. Evanson), 12, 772.

B

Bauerite process, 9, 586.
Bauer's new No. 480 refiner, 7, 441.
Bonus payments and tax regulations (Charles C. Moffatt), 8, 519.
Butterworth stresses closer working relationship between equipment manufacturer and mill-customer (A. W. J. Dyck), 11, 711.

C

Celgar Ltd. manufactures bleached kraft pulp, 6, 353.
Choose the right paper coating for better printability (Peter W. Sherwood), 9, 588.
Clarifiers solve effluent problems (Leo Walter), 1,26.
Coater, new Flexiblade at Newton Falls (A. W. J. Dyck), 9, 584.
Coating for better printability (Peter W. Sherwood), 9, 588.
Coating laboratory for customer service (A. W. J. Dyck), 11, 716.
Coatings, behavior of coating mixtures on paper (R. A. Diehm), 7, 439.
Coatings, behavior of coating mixtures on the coating machines (R. A. Diehm), 6, 368.
Coatings, behavior of coating mixtures on the coating machines, 5, 305.
Coatings, coating additives (R. A. Diehm), 4, 225.
Coatings, coating mixtures (R. A. Diehm), 2, 87.
Coatings, pigment flocculation and deflocculation (R. A. Diehm), 1, 22.
Cold soda pulp for corrugating medium (J. O. Nicholson), 8, 517.
Continental Can's new paperboard mill (A. W. J. Dyck), 3, 155.
Conversion to all-kraft pulping at Oxford Paper Co., 7, 444.
Colorants in paper making (Joseph W. Dragonetti), 4, 229.
Corrugating medium from cold soda pulp (J. O. Nicholson), 8, 517.
Crowning of rolls (D. S. Davis), 9, 595.

D

Determination of fiber length distribution (Morris W. Kane), 2, 96.
Development progress with the Verti-Forma (W. S. Corbin), 8, 512.
Dilts new research laboratory designed for customer service and research (A. W. J. Dyck), 11, 716.

E

Effluent problems solved with clarifiers (Leo Walter), 1, 26.
Electric motors encapsulated with Epoxylite (Patrick A. Timmins and Vernon L. Grochow), 12, 770.
Epoxylite encapsulation system for electric motors (Patrick A. Timmins and Vernon L. Grochow), 12, 770.
Equipment featured for the pulp and paper industry, 10, 655.
Estimation of fiber length index (D. S. Davis), 4, 240.
Export trends (Fred Bryer), 11, 707.

F

Factors to consider when selecting an unwind stand (Hugh K. Schilling), 3, 171.
Far East paper industry, 1, 33.
Feltless wet machine at Hammermill, 6, 366.
Felt performance emphasized at Huyck's science center, 2, 92.
Felts, progress report on needled felts, 11, 710.
Fiber length distribution (Morris W. Kane), 2, 96.
Fiber length index (D. S. Davis), 4, 240.
Fiber length index from breaking length and slowness (D. S. Davis), 6, 370.
Fine paper suction transfer machine operation discussed at Albany Felt round table, Part I: 4, 236; Part II, 5, 312.
Finishing, shipping and converting — automated (Jesse P. Rambo), 1, 25.
Fritz Trophy goes to U. S. Gypsum, 8, 509.

G

Gilman Paper Co. installs new pulper (A. W. J. Dyck), 7, 442.
Groundwood from chips with use of Bauer's No. 480 refiner, 7, 441.

H

Hammermill's new feltless wet machine, 6, 366.
Heat exchangers, plate-type, 6, 362.
Highlights of 1961 National Safety Congress, 8, 521.
How good is your paperboard product for printing?, 2, 95.
How to get isotopes and what problems are encountered with their use (Edward J. Amberg Jr.), 11, 713.

I

IBM process control at Potlatch Forest, 3, 170.
IBM 1710 system in operation at Potlatch Forest, 9, 594.
Improved defibering and capacity increases in stock preparation pulpers (C. N. Kohlhepp), 1, 28.
Isotopes, their use and associated problems (Edward J. Amberg Jr.), 11, 713.
Isotopes, what is involved in their use (E. M. Amberg Jr.), 10, 659.
Isotopes, why and where used (E. M. Amberg Jr.), 9, 591.

K

Kraft linerboard mill at Tennessee River, 5, 295.
Kraft mill put in operation by Rayonier Canada Ltd., 10, 649.
Kraft pulp mill put into operation by Celgar Ltd., 6, 353.

L

Langston speedmaster at New York & Penn Co. makes quality rolls, 2, 90.

M

Machinery industry outlook for 1962, 11, 712.
Maintenance automated, 11, 708.
Market oriented engineer (Benton R. Cancell), 9, 583.
Menasha's NSSC mill features integrated machinery line, 12, 765.
Mergers in the pulp and paper industry (Warren B. Bullock), 6, 363.
Mind your own business (Ted Pollock), 1, 15; 2, 80; 4, 223; 7, 454.
Miniature pulpwood plantation — after twenty years, 5, 308.
Modern trimmer speeds finishing room production (Farhang Javid), 8, 511.

N

Needled felts, a progress report, 11, 710.
New Flexiblade coater at Newton Falls Paper Mill (A. W. J. Dyck), 9, 584.
Newton Falls installs Flexiblade coater (A. W. J. Dyck), 9, 584.
NSSC corrugated board mill put in operation by Menasha Wooden Ware, 12, 765.

O

Oxford Paper converts to all-kraft pulping, 7, 444.

P

Paperboard mill put in operation by Continental Can (A. W. J. Dyck), 3, 115.
Paper industry in the Far East, 1, 33.
PIMA holds 42nd annual conference, 4, 239.
Pipe, fittings, valves and pumps in waste paper recovery systems (Roland L. Allen Jr.), 6, 361.
Plain talk about automation (Clifford E. Evanson), Part I: What is automation and what does it accomplish?, 12, 772.
Plastic coatings for increased paperboard sales, 2, 98.
Plate-type heat exchangers reduce fuel bills, 6, 362.
Polysulfide pulping (I. W. Scopp), 4, 233.
Potlatch Forest installs IBM process control on paper machine, 3, 170.
Potlatch Forest installs IBM system, 9, 594.
Progress report on needled paper machine felts (W. S. Wightman), 11, 710.
Printability of paperboard, 2, 95.
Pulp and paper machinery industry outlook for 1962 and review of 1961, 11, 712.
Pulper in operation at Gilman Paper Co. (A. W. J. Dyck), 7, 442.
Pulping around the world (F. T. Peterson), 3, 168.
Pulping with polysulfide (I. W. Scopp), 4, 233.
Pulpwood plantation, progress report, 5, 308.

R

Rayonier Canada's new kraft mill in production, 10, 649.
Rheology of paper coatings (R. A. Diehm), Part IV: Pigment flocculation and deflocculation, 1, 22; Part V: Coating mixtures 2, 87; Part VI: Coating Additives, 4, 225; Part VII: Behavior of coating mixtures on the coating machines, 5, 305; Part VIII: Behavior of coating mixtures on the coating machines, 6, 368; Part IX: Behavior of coating mixtures on paper, 7, 439.
Roll crowning (D. S. Davis), 9, 595.

S

Safety Congress, 1961 highlights, 8, 521.
Silacide shows excellent performance as a slimicide, 12, 776.
Slimicide, a new silver fluoride complex, 12, 776.
Suction transfer machine operation, Part I, 4, 236; Part II, 5, 312.
Sydrapulper equipped with Vokes rotors (C. N. Kohlhepp), 1, 28.
Synthetic fiber papers in today's technology, 10, 657.

T

TAPPI and APPA annual conference (1961) (Warren B. Bullock), 1, 29.
TAPPI holds successful 47th annual (1962) meeting, 12, 774.
Tennessee River Pulp & Paper Co. in full kraft-linerboard production, 5, 295.
The urge to merge (Warren B. Bullock), 6, 363.
Top felt performance — Huyck science center's main objective, 2, 92.
Trimmer speeds finishing room operation (Farhang Javid), 8, 511.
Twenty-eighth exposition of chemical industries, 10, 655.

U

Use of colorants in modern paper making (Joseph W. Dragonetti), 4, 229.
Use of pipe, fittings, valves and pumps in the pulp and paper industry (Roland L. Allen Jr.), Part XV: Application of pipe, fittings valves and pumps in waste paper recovery, 6, 361.

U. S. Gypsum Co. receives Fritz Trophy, 8, 509.
Unwind stand selection (Hugh K. Schilling), 3, 171.

V

Verti-Forma, a development progress report (W. S. Corbin), 8, 512.

W

Why and where isotopes should be used in the paper industry (E. M. Amberg Jr.), 9, 591.
Winder installation at New York & Penn's mill, 2, 90.
World production of pulp and paper, 11, 712.

FOREIGN ABSTRACTS

A

Abnormal wood fibers, 6, 404.
Acid bisulfite cooking, effects of thiosulfates in, 3, 192.
Acids from fermented spent liquor, 8, 550.
Aging of alkali cellulose, 2, 123.
Alkali solubility of pulps, 7, 476.
Antioxidants used in food packaging, 3, 192.

B

Behavior of solutions of two metallic complexes, 5, 322.
Bisulfite, acid bisulfite, and kraft cooks, comparison of, 3, 192.
Bisulfite and magnesium sulfite, oxidation of, 2, 122.
Bleaching agent — peroxide, 11, 733.

C

Cellulose, alkali, aging of, 2, 123.
Celluloses in Cadoxen solutions, stability of, 2, 123.
Celluloses, native, swelling of, 1, 54.
Cleaner, vortex, 3, 192.

D

Deabata, Acacia, Link, pulping, 6, 404.
Detection of paper fillers by radial chromatography, 10, 679.
Determination of the yellow tone of pulps and rayon, 4, 263.
Determination of starch in paper, 1, 53.
Determining the hardwood content of chips and pulps, 10, 679.
Digesters (sulfite), corrosion in, 12, 799.
Digesters, the inspection of, 1, 54.

E

Effects of certain neutralization liquors in inhibiting yeast growth, 12, 799.
Effects of soil on growth of Monterey pine, 5, 322.
Effects of thiosulfates in acid bisulfite cooking, 3, 192.
Electronic paper-sorting machine, 12, 799.
Eucalypt woods, dense, papermaking properties of, 1, 54.

F

Fillers in paper detected by radial chromatography, 10, 679.
Finnish Pulp and paper industry in 1960, 4, 264.
Flocculation during sedimentation, 4, 263.
Flocculation of steaming fiber suspensions, 7, 476.
Fluorescent whitening agents in paper manufacture, 6, 403.
Foam prevention in the paper industry, 8, 550.
Food packaging, new antioxidants used in, 3, 192.
Fresh water savings in paper machine operation, 4,263.

G

Gas permeability of plastic-coated papers, 9, 619.
Greaseproof papers, unbleached sulfite pulp for, 4, 263.
Grease resistance of paper, 11, 733.
Groundwood pulp, preservation of, 9, 619.
Groundwood pulps, freeness and strength in, 9, 619.
Groundwood requirements in Czechoslovakian newsprint, studies on, 1, 53.

H

Hardboards, preservative treatment of, 12, 799.
Hardwood content determined in pulps and chips, 10, 679.
Hemicelluloses in pulps and retin retention, 7, 476.
Hydrotropic solvents for prehydrolysis in preparing viscose pulps, 6, 403.

K

Kappa number, a modification of the, as applied to semichemical pulps, 1, 68.
Kinematic high frequency and ultrasonic treatment of pulps, 6, 404.

L

Light scattering coefficients from reflectance data, 3, 194.
Light typographic drying oils from tall oil, 8, 550.
Liquor, acids from fermented spent, 8, 550.
Liquor, sulfite spent, soluble base recovery from, 5, 322.
Liquors, spent sulfite, cation exchangers from, 6, 404.
Liquors, sulfate black, oxidation of, 6, 403.
Liquors (sulfite spent), alcohol from, 12, 799.
Load elongation behavior of M.G. paper, 10, 679.

M

Magnesium, oxidation of, sulfite and bisulfite, 2, 122.
Manufacture of paper from sorghum in Spain, 2, 122.
Mold growth on corrugated board, 4, 264.
Monterey pine, growth of, effects of soil on, 5, 322.

N

Native celluloses, swelling of, 1, 54.
Newsprint, Czechoslovakian, studies on groundwood requirements in, 1, 53.
NSSC spent liquors, sugar sulfonic acids from, 10, 695.

O

Oxidation of magnesium sulfite and bisulfite, 2, 122.
Oxidation of sulfate black liquors, 6, 403.

P

Paper fillers, detection by radial chromatography, 10, 679.
Paper, grease resistance of, 11, 733.
Paper machines, photographs demonstrating the hydraulic behavior on, 10, 679.
Paper (M.G.), load elongation behavior of, 10, 679.
Papermaking engineering at Darmstadt, 5, 322.
Papermaking properties of dense eucalypt woods, 1, 54.
Paper manufacture from sorghum in Spain, 2, 122.
Papers, printing, packaging of, 6, 403.
Paper-sorting machine, electronic, 12, 799.
Paper,stretch in, 1, 53.
Peroxide as a bleaching agent, 11, 733.
Photographs demonstrating the hydraulic behavior on paper machines, 10, 679.
Polythionates and thiosulfates in sulfite spent liquor, 7, 476.
Prehydrolysis in preparing viscose pulps, hydrotropic solvents for, 6, 403.
Preservation of groundwood pulp, 9, 619.
Preservative treatment of hardboards, 12, 799.
Pulp for condenser paper, continuous beating of, 9, 619.
Pulp (groundwood), preservation of, 9, 619.
Pulp properties, influence of chemical constituents on, 8, 549.
Pulp, unbleached sulfite, for greaseproof papers, 4, 263.
Pulping Acacia deabata, Link, 6, 404.
Pulping by use of various gases in dimethylsulfoxide, 9, 622.
Pulps, alkali solubility of, 7, 476.
Pulps and chips, determining the hardwood content of, 10, 679.
Pulps, cadoxene in determining intrinsic viscosities of, 2, 123.
Pulps (groundwood), freeness and strength in, 9, 619.
Pulps, ultrasonic treatment of, and kinematic high frequency, 6, 404.
Pulps (wood), indices of delignification in, 8, 550.

R

Rayon grade dissolving pulps, evaluating, 2, 122.
Release of wet webs from various surfaces, 8, 549.

S

Sedimentation, flocculation during, 4, 263.
Size press application of surface sizing agents, 9, 638.
Sizing agents (surface), size press application of, 9, 638.
Soil, effects of, on growth of Monterey pine, 5, 322.
Solvents, hydrotropic, for prehydrolysis in preparing viscose pulps, 6, 403.
Solutions of two metallic complexes, behavior of, 5, 322.
Starch in paper, determination of, 1, 53.
Studies on groundwood requirements in Czechoslovakian newsprint, 1, 53.
Sugar sulfonic acids from NSSC spent liquors, 10, 695.
Sulfite cooking with sulfur dioxide solutions, 11, 733.
Sulfite, magnesium and bisulfite, oxidation of, 2, 122.
Sulfite pulp, unbleached, for greaseproof papers, 4, 263.
Sulfite spent liquor in mill waters, tests for, 8, 549.
Sulfite spent liquor, thiosulfates and polythionates in, 7, 476.
Sulfur dioxide solutions used in sulfite cooking, 11, 733.
Swelling of native celluloses, 1, 54.

T

Tall oil (Finnish) components of, 9, 622.
Tall oil, light typographic drying oils from, 8, 550.
Yellowing on pulps and papers, 1, 53.
Thiosulfates and polythionates in sulfite spent liquor, 7, 476.
Thiosulfates in the sulfite cook, fate of, 3, 192.
Tinting in offset printing papers, 4, 264.
Tree diseases, control of 2, 122.

U

Ultrasonic treatment of pulps, and kinematic high frequency, 6, 404.
Unbleached sulfite pulp for greaseproof papers, 4, 263.

V

Viscose pulps, preparing, hydrotropic solvents for prehydrolysis in, 6, 403.
Vortex cleaner, 3, 194.

W

Water, fresh, savings in paper machine operation, 4, 263.
Whitening agents, fluorescent, in paper manufacture, 6, 403.
Wood fibers, abnormal, 6, 404.
Wood pulps, indices of delignification in, 8, 550.

PATENT REVIEWS

A

Apparatus for cast-coating paper, 11, 747.
Apparatus for forming a paper web, 7, 479.
Apparatus, paper making, 8, 553.

B

Bleaching, continuous pulp, 8, 553.
Bleaching of pulp, 5, 324.

C

Cast-coating paper, apparatus for, 11, 747.
Chemicals from pulp residual liquor, recovery of, 5, 336.
Chips (wood), impregnation of, 10, 680.
Coated paper with water vapor barrier resistance, 10, 680.
Continuous digestion process, 7, 479.
Continuous pulp bleaching, 8, 553.
Control of stock supply in paper making machines, 6, 407.

D

Dilute slurry, method of molding a low density high strength shaped body from, 2, 126.
Disintegration of fibrous material, apparatus for, 3, 195.
Drying oils, impregnation of hardboard with, 11, 747.

F

Fiberboard, incombustible, 1, 55.
Fiberboard, surface decorated, 8, 553.
Fiber paper, synthetic, 8, 553.
Fibrous material, apparatus for disintegration of, 3, 195.
Fourdrinier wire, instrument control of freeness on the, 4, 267.

H

Hardboard, impregnation of with drying oils, 11, 747.
Hardboard, incorporating oil in, 6, 408.
Hydroxide (titanous), paper containing, 4, 267.

L

Lignin solids, separation of from pumping liquors, 11, 747.
Liquid dispersion conduit, 5, 324.
Liquor, pulp residual, recovery of chemicals from, 5, 336.
Liquor, spent sulfite, treatment of, 9, 623.
Liquor, waste sulfite, pyrolysis of, 6, 407.

M

Machines, paper making, 11, 747.
Manufacture of glossy-coated paperboard sheets, 9, 624.
Materials, foamable, incorporation of in corrugated paperboard, 7, 479.
Method of molding a low density high strength shaped body from a dilute slurry, 2, 126.

O

Oil in hardboard, incorporating, 6, 408.
Oils (drying), impregnation of hardboard with, 11, 747.

P

Paper, apparatus for cast-coating, 11, 747.
Paperboard, corrugated, incorporation of foamable materials in, 7, 479.
Paperboard, corrugated, wax impregnated, 9, 624.
Paperboard giving a water-repellent coating, 5, 324.
Paperboard, manufacture of, 3, 210.
Paperboard sheets, glossy coated, manufacture of, 9, 624.
Paper coated with water vapor barrier resistance, 10, 680.
Paper containing titanous hydroxide, 4, 267.
Paper, dry strength, 2, 126.
Paper, flame-proofed, water-resistant, 12, 810.
Paper, high dry strength, 3, 210.
Paper, impregnation of with silica sols, 7, 480.
Paper, laminated, 8, 553.
Paper, machine-glazed, 11, 747.
Paper making apparatus, 8, 553.
Paper making machines, 11, 747.
Paper making machines, control of stock supply in, 6, 407.
Paper, preparation of from partially acetylated fibers, 10, 680.
Paper products, water- and grease-proofing, 10, 680.
Paper pulp, process for making, 4, 267.
Paper, sized and mineral-filled, 12, 810.
Paper sizes, fortified tall oil rosin, 12, 810.
Paper stock recovery process, 3, 195.
Paper, synthetic fiber, 8, 553.
Paper web, apparatus for forming, 7, 479.
Paper, wet strength, 3, 196.
Paper, wet-strength, 12, 810.
Para-hydroxybenzoic acid, extraction of from cabbage palmetto, 7, 480.
Pre-heating wallboards, drying and, 2, 124.
Preparation of paper from partially acetylated fibers, 10, 680.
Pressure gland for tail transfer, 11, 747.
Processes, integration of sodium-based sulfite and sulfate pulping, 9, 624.
Process for cleaning and pulping waste, 2, 124.
Process for making paper pulp, 4, 267.
Process, paper stock recovery, 3, 195.
Production of a tanning agent from waste sulfite liquor, 2, 124.
Pulp, apparatus for feeding at a continuous rate, 1, 55.
Pulping processes, sodium-based sulfite and sulfate, integration of, 9, 624.
Pulp manufacture, 6, 408.
Pulp molding machine, continuous in line, 4, 267.
Pyrolysis of waste sulfite liquor, 6, 407.

R

Recovery of chemicals from pulp residual liquor, 5, 336.
Recovery process, paper stock, 3, 195.
Rosin paper sizes, fortified tall oil, 12, 810.
Rosin size, 9, 624.

S

Stock supply in paper making machines, control of, 6, 407.
Sulfite and sulfate pulping processed, integration of sodium-based, 9, 624.
Sulfite liquor waste, pyrolysis of, 6, 407.
Synthetic fiber paper, 8, 553.

T

Tail transfer, pressure gland for, 11, 747.
Tall oil rosin paper sizes, fortified, 12, 810.
Tanning agent from waste sulfite liquor, production of a, 2, 124.
Titanous hydroxide, paper containing, 4, 267.

W

Wallboard, manufacture of, 12, 810.
Wallboard, pre-heating and drying, 2, 124.
Wastepaper pulp, digestion of, 8, 553.
Waste sulfite liquor, pyrolysis of, 6, 407.
Water- and grease-proofing paper products, 10, 680.
Water vapor barrier resistance, paper coated with, 10, 680.

INDUSTRY NEWS

A

Aluminum-coated glassine by new Nicolet process, 2, 117.
American Cyanamid Co. develops synthetic fiber sheet, 10, 667.
A. O. Smith now using giant x-ray machine, 12, 785.
Atomic power to be used in production of paper, 6, 388.

B

Bark pelleting process announced by Sprout, Waldron, 5, 315.
Bark (pine) used to manufacture organic plant food and mulch at Chesapeake Corp., 12, 786.
Bark (Spruce) — a source of new materials, 4, 253.
Bleach towers (high-density), Buckeye adapts interface detection method in, 6, 386.
Brightness barrier broken by chlorine dioxide process, 11, 723.
Brown Co. develops sulfite pulp, 7, 463.

C

Canada, U.S. opportunities in, 8, 532.
Cellulose (graft) developed by Rayonier, 3, 179.
Chlorine dioxide processes break brightness barrier, 11, 723.
Consolidated Operates new machine at Stevens Point, Wis., 11, 726.
Container Corp. begins production of expanded polystyrene, 4, 254.
Container Corp. establishes plant in Houston, Texas, 1, 44.
Continuous use of detergent in felt washing operations, 12, 792.
Crown Zellerbach operates corrugated shipping container plant, 10, 670.
Curtain coating techniques, National Starch achieves further success on, 9, 603.

F

Felt treatment with a new chemical called Polar, announced by Huyck Corp., 11, 725.
Felt washing operations — continuous use of detergent, 12, 792.
Fiber spinning laboratory established by Fabric Research Laboratories Inc., 2, 107.
Fiber sheet (synthetic) developed by American Cyanamid Co., 10, 667.
Fibrit, a new product for making pulp, 11, 735.
Filter system made from Koroseal operated by Rome Draft Co., 6, 384.
Forestry research study in hardwood timber management, 6, 383.
Fourdrinier wire (Lev-L-Weve) completes first year on market, 11, 726.
Fourdrinier wire of stainless steel introduced by W. S. Tyler Co., 1, 41.

G

General Electric process control computer to be installed at Southern Land's new mill, 10, 669.
Gift Wrappings and Tyings Association — a new trade association operated as a division of the Tissue Association, 5, 315.

H

Hardwood timber management, a research study in, 6, 383.

I

India's paper industry in growing economy, 8, 531.
Ingersoll-Rand demonstrates new central vacuum system to industry leaders, 6, 383.
International Paper announces $3 million program, 12, 790.

J

J. O. Ross Celebrates 40th year, 8, 532.

K

Kimberly-Clark completes major expansion at Neenah, Wis., 3, 183.
Koroseal, Rome Kraft Co. operates a filter system made from, 6, 384.

L

Lawson Co. inaugurates joint venture with Canadian firm, 7, 466.
Layne Associates — a new organization, 2, 112.
Liquor (spent) converted to marketable by-product by Marathon, 1, 41.

M

Marathon converts spent liquor to marketable by-product, 1, 41.

N

National Starch achieves further success on curtain coating technique, 9, 603.
Nicolet Paper Corp. announces aluminum-coated glassine process, 2, 117.

O

Organic plant food and mulch from pine bark in production at Chesapeake Corp., 12, 786.

P

Panoramic design technique — a new engineering method, 10, 667.
Paperboard manufacturing, Packaging Corp. to increase use of, 12, 787.
Paperboard mill opened by Weyerhaeuser, 12, 790.
Patrician Paper Co. Inc. — a newly organized company, 2, 107.
Pelleting process announced by Sprout, Waldron, 5, 315.
Plastics processes study undertaken by Arthur D. Little Inc., 7, 463.
Polar, a new chemical for felt treatment announced by Huyck Corp., 11, 725.
Polystyrene (expanded) now in production by Container Corp., 4, 254.
Polyurethane foam, a new manufacturing process for, 7, 463.
Potlatch announces production of new paperboard, 3, 182.
Pulp (bamboo dissolving) shows commercial potential, 10, 667.
Pulp & Paper Know-How Associates — a newly formed consulting organization, 9, 603.
Pulp (sulfite) developed at Brown Co., 7, 463.

R

Radiation applications, resources technology division for, 7, 463.
Report pinpoints U.S. opportunities in Canada, 8, 532.
Research study in hardwood timber management, 6, 383.
Rome Kraft Co. operates plastic filter system made from Koroseal, 6, 384.

S

Sheray Corp. — a new paper tuber converter, 4, 254.
Southern Land Timber & Pulp Corp. to install GE process control computer at new mill, 10, 669.
Sprout, Waldron & Co. announces pelleting process, 5, 315.
Stainless steel fourdrinier wire introduced by W. S. Tyler Co., 1, 41.
Staley Mfg. Co., A. E., dedicates new research center, 5, 319.
Strathmore Paper Co. rebuilds No. 6 machine at Woronoco, Mass., mill, 8, 538.
St. Regis builds technical center at Clarkstown, N.Y., 1, 42.
Sulfite pulp developed at Brown Co., 7, 463.
Synthetic fiber sheet developed by American Cyanamid Co., 10, 667.

T

TAPPI medal (1962) awarded to C. Earl Libby and W. Boyd Campbell, 11, 729.
TAPPI organizes Southern California District, 9, 604.
Tennessee River's new Kraft mill at Counce, Tenn., 4, 256.
Turcot Paperboard Mills Co. begins paperboard production, 9, 606.
Tyler Co., W. S., introduces fourdrinier wire of stainless steel, 1, 41.

U

U. S. opportunities in Canada, 8, 532.

V

Vacuum — a new central vacuum system unveiled by Ingersoll-Rand, 6, 383.
Vinyl panel in production at Barrett Division of Allied Chemical Co., 9, 609.

W

Wausau Paper Mills Co. completes multimillion dollar expansion, 7, 468.
Weyerhaeuser opens new paperboard mill, 12, 790.
W. R. Grace-International completes Columbia mill, 7, 470.

WHITHER?

A

Adhesives, new developments in, 12, 816.
Air-column shelters, 2, 142.
Aluminum, Nicolet Paper coats, on glassine, 4, 284.
Ammonia, new process to recover from pulping effluent, 3, 212.
Anti-slip surface finish, 1, 72.
Aspen, results from cold soda pulping of, 12, 816.
Atmospheric nitrogen, lightning fixes 1.5 billion tons annually, 9, 640.

B

Bags to replace garbage cans, 1, 72.

C

Chemical industry's needs for scientists and engineers set at 158,000 by 1970, 10, 696.
Chemical to reactivate DDT, 4, 284.
Chemical treatment of trees "on the stump", 4, 284.
Chemosterilants — a new weapon against insects, 9, 640.
Chlorination, gas-phase, 12, 816.
Chips, mechanical pulp from, 7, 496.
CMC, new data on the use of, 2, 142.
Coal slurries can be burned without prior dewatering, 9, 640.
Cold soda pulping of aspen, results from, 12, 816.
Color reversion in highly bleached papers, sodium borohydride prevents, 10, 696.
Corrugated containers, denser paperboard for, 4, 284.
Cotton linters, increased use of, 5, 340.
Crude tall oil, rigid urethane foams derived from, 6, 426.
Cyclic lighting, growth control by, 8, 572.

E

Engineer and scientist needs in chemical industry, 10, 696.
Entrepreneurial touch, 10, 696.
Enzymes for pulp and paper process, 2, 142.
Export trends, 4, 284.
Exports of U.S. paper mill machinery increased, 9, 640.
Extensible-paper improvements, 5, 340.

F

Fertilizers, fire-fighting, 7, 496.
Fiber-to-fiber bonding, 11, 752.
Fiber, use of glass a paper-making, 7, 496.
Forest mechanization, scientific measurement of, 5, 340.

G

Gamma irradiator for grafting studies on cellulosic materials, 8, 572.
Garbage bags to replace garbage cans, 1, 72.
Gas-phase chlorination, 12, 816.
Glassine, Nicolet Paper coats aluminum on, 4, 284.
Glass, use of as a paper-making fiber, 7, 496.
Growth control by cyclic lighting, 8, 572.
Gypsy moths (male) beware of "Gyplure", 5, 340.

H

Helicopter logging, 9, 640.
"Hi-Heat" diffusion washing, 12, 816.
House, paper, 8, 572.

I

Intelligence agency proposed, 3, 212.

J

Japan expected to enter world chemical markets, 1, 72.
Japanese paper demand increasing, 9, 640.

L

Laminating polyurethane foam to papers and plastic film, new method of, 6, 426.
Latex (polyethylene) for paper coating, 2, 142.
Lightning fixes 1.5 billion tons of atmospheric nitrogen annually, 9, 640.

N

Newsprint production up, 5, 340.
Nicolet Paper coats aluminum on glassine, 4, 284.

O

Oil (crude tall) rigid urethane foams derived from, 6, 426.

P

Paper and board outlook, 1962, 10, 696.
Paper and paperboard production, 7, 496.
Paper and paperboard production up, 6, 426.
Paper and pulp process, new enzymes for, 2, 142.
Paper, bleached, sodium borohydride prevents color reversion in, 10, 696.
Penton-lined equipment, 6, 426.
Pentosan content, determination of, 3, 212.
Pen, ultrasonic, writes without ink, 7, 496.
Plant growth control by cyclic lighting, 8, 572.
Plastic fourdrinier fabrics, new advances in, 6, 426.
Plastic pipe, 8, 572.
Polyethylene latex for paper coating, 2, 142.
Pulp (mechanical) from chips, 7, 496.
Pulping (cold soda), of aspen, results from, 12, 816.
Pulping, sulfite, potential still good, 11, 752.

R

Rubber lining (industrial), new, 1, 72.
Rubber, low-friction surface on, 1, 72.

S

Scientist and engineer needs in chemical industry, 10, 696.
Sea-water conversion plants slated for mass production, 3, 212.
Shelters, air-column, 2, 142.
Sodium borohydride prevents color reversion in highly bleached papers, 10, 696.
Sulfite pulping potential still good, 11, 752.

W

Waste products, strategies in chemical utilization of, 10, 696.
What is wrong with the paper industry?, 11, 752.
Wood treating process, Koppers, 3, 212.
